

# ASPLOS 2018

23rd International Conference  
on Architectural Support for  
Programming Languages and  
Operating Systems

Williamsburg, VA, USA March 24-28, 2018

Abstract submissions	<b>Aug 4, 2017</b>
Full paper submissions	<b>Aug 11, 2017</b>
Author response	<b>Oct 25, 2017</b>
Notification	<b>Nov 13, 2017</b>
Final copy deadline	<b>Jan 19, 2018</b>

**General Chairs** Xipeng Shen and James Tuck (North Carolina State University)  
**Program Chairs** Ricardo Bianchini (Microsoft Research) and Vivek Sarkar (Rice University)

ASPLOS is the premier forum for multidisciplinary systems research spanning computer architecture and hardware, programming languages and compilers, operating systems and networking. The ASPLOS 2018 will be held in Williamsburg, Virginia, a town that combines a rich slice of American Colonial and Revolutionary history with a modern college atmosphere.

Like its predecessors, ASPLOS 2018 invites papers on ground-breaking research at the intersection of at least two ASPLOS disciplines: architecture, programming languages, operating systems, and related areas. Non-traditional topics are especially encouraged. The importance of cross-cutting research continues to grow as we grapple with the end of Dennard scaling, the explosion of big data, scales ranging from ultra-low power wearable devices to exascale parallel and cloud computers, the need for sustainability, and increasingly human-centered applications. ASPLOS embraces systems research that directly targets these new problems in innovative ways. The research may target diverse goals, such as performance, energy and thermal efficiency, resiliency, security, and sustainability. The review process will be sensitive to the challenges of multidisciplinary work in emerging areas.

Areas of interest include, but are not limited to:

- Existing and emerging platforms at all scales, from embedded to cloud
- Internet services, cloud computing, and datacenters
- Multicore architectures and systems
- Heterogeneous architectures and accelerators
- Systems for enabling parallelism at an extreme scale
- Programming models, languages, and compilation for all platforms
- Managing, storing, and computing on big data
- Virtualization and virtualized systems
- Memory and storage technologies and architectures
- Power, energy, and thermal management
- Security, reliability, and availability
- Verification and testing, and their impact on design
- Support for approximations and approximate computing
- Non-traditional computing systems

## Program Committee

Ricardo Bianchini	Microsoft Research
Vivek Sarkar	Rice University
Yungang Bao	China ICT
Rajkishore Barik	Intel Labs
Andrew Baumann	Microsoft Research
Abhishek Bhattacharjee	Rutgers University
Uday Bondhugula	Indian Institute of Science
Adrian Caulfield	Microsoft Research
Luis Ceze	University of Washington
Rong Chen	Shanghai Jiao Tong University
Fred Chong	University of Chicago
Christina Delimitrou	Cornell University
Chen Ding	University of Rochester
Natalie Enright Jerger	University of Toronto
Phillip Gibbons	Carnegie Mellon University
David Grove	IBM Research
Rajiv Gupta	University of California at Riverside
Tim Harris	Oracle
Hank Hoffman	University of Chicago
Trent Jaeger	Penn State University
Mahmut Kandemir	Penn State University
Kim Keeton	Hewlett-Packard Enterprise
Martha Kim	Columbia University
Seyong Lee	Oak Ridge National Laboratory
Xu Liu	College of William & Mary
Jean-Pierre Lozi	University of Nice Sophia Antipolis
Shan Lu	University of Chicago
Scott Mahlke	University of Michigan at Ann Arbor
Kathryn S. McKinley	Google
Satish Narayanasamy	University of Michigan at Ann Arbor
David Nellans	Nvidia
Jason Nieh	Columbia University
Santosh Pande	Georgia Tech
Keshav Pingali	University of Texas at Austin
Vivien Quema	Grenoble INP
Vijay Reddi	University of Texas at Austin
Christopher J. Rossbach	University of Texas at Austin and VMware Research
Karu Sankaralingam	University of Wisconsin at Madison
Kai Shen	Google
Arrvindh Shriraman	Simon-Fraser University
Mark Silberstein	Technion
Armando Solar-Lezama	Massachusetts Institute of Technology
Yan Solihin	North Carolina State University and NSF
Karin Strauss	Microsoft Research
Jeff Stuecheli	IBM
Michael Swift	University of Wisconsin at Madison
Lingjia Tang	University of Michigan at Ann Arbor
Mohit Tiwari	University of Texas at Austin
Dan Tsafir	Technion and VMware Research
Haris Volos	Hewlett-Packard Enterprise
Thomas Wenisch	University of Michigan at Ann Arbor
Yiyang Zhang	Purdue University
